DTEK engineers restore power for 3,600+ households in Dnipropetrovsk Region

On 2 November, in just one day DTEK Dnipro Grids restored power supply to more than 3,600 households in three localities of the region affected by the shelling. Despite the dangerous environment, the power engineers continue to restore the grids where green-lit by the Armed Forces of Ukraine and the State Emergency Service of Ukraine. Our mission is to ensure that cities, towns, and villages in the region have enough power for day-to-day life.

Dnipropetrovsk Region continues to suffer from hostile attacks, resulting in frequent damage to power grids and leaving residents without electricity.

Emergency crews are repairing enemy-damaged power lines and equipment, doing everything they can to turn the power back on as quickly as possible. They start working as soon as green-lit by the State Emergency Service and the Armed Forces of Ukraine.

Over the past day, DTEK Dnipro Grids managed to restore power to 3,651 households in three settlements affected by shelling, and power supply has been fully restored in these areas.

We are working 24/7 to keep electricity supply to households and businesses reliable.
