To support the equipment needs of Ukrainian mines, Corum machine builders produced 7 roadheader and shearers, as well as 450,000 spare parts

Employees of [Corum](#) (DTEK Energo) machine-building enterprises continue to help miners to extract thermal coal, which is important for the country.

In five months of this year, the company's machine builders manufactured and repaired 606 units of mining equipment. Among them are 7 new roadheaders and shearers.

Machine builders also provided miners with 450,000 spare parts and components.

Such volumes of the most necessary manufactured equipment allow us to continue to build a stronger support for heat generation during next heating season.

"Today, everyone is united by one goal - so that, despite the massive attacks on energy sector, Ukrainians have as much light as possible. Debris clearance and restoration work at the thermal power plants damaged by the attacks continue 24/7. Everyone works in their place. Miners and machine builders are also in their places. Miners - in order to extract sufficient amount of coal for the reliable operation of thermal power plants. And machine builders, who have to make sure that the miners always have all the necessary equipment for such needs,"

said Ildar Saleev, CEO of DTEK Energo.
