## Metinvest supplies drones and metal detectors to air defence units

**As part of Rinat Akhmetov's Steel Front military initiative, Metinvest has delivered another support package to the A4992 military unit, including UAVs, metal detectors, solar panels, as well as repair kits and snow tyres.**

The equipment will reach the soldiers defending critical infrastructure in eastern Ukraine. The military unit personnel are thankful to the Group and, specifically, Metinvest Pokrovskvuhillia, for the ongoing and extensive support, as this is yet another crucial batch of supplies making it to the frontlines. In order to cover as many needs of defenders as possible, the company tailored its care package according to a pre-agreed list.

### *AID IN NUMBERS*

*Since the onset of the all-out war, Metinvest's total aid to the Ukrainian Defence Forces exceeded UAH 2.5 billion.*

"I would like to thank Metinvest on behalf of our military unit for supporting not only our battalion but the entire Ukraine. We are constantly getting expensive equipment that boosts our combat capabilities, allowing us to more effectively protect Donetsk Oblast's critical infrastructure from enemy drones",

*comments the commander of A4992 military unit, lieutenant colonel Serhii Stepaniuk.*
