## **DRI works with industry associations to advance renewable energy across Europe**

DRI works with industry associations to advance renewable energy and battery storage across Europe

These association partnerships highlight DRI's broader commitment to collaborating with industry leaders and help governments reach their net zero targets.

DRI is committed to advancing the energy transition across Europe. As part of its ongoing efforts to support the growth of renewable energy and battery storage, DRI is actively collaborating with several key industry associations across the countries where it operates: Croatia, Italy, Poland, and Romania.

At the moment, in [Croatia](#), DRI is an active member of the Renewable Energy Sources of Croatia; in [Italy](#), we partner with Elettricità Futura; in [Poland](#), we are members of the Polish Wind Energy Association and the Polish Chamber for Energy Storage (PiMe); and finally, in [Romania](#), DRI is part of the Romanian Photovoltaic Industry Association and the Romanian Wind Energy Association (RWEA).

As DRI continues to grow, with a 1.4GW portfolio spanning projects in operations, construction, and others in various stages of development, these association partnerships highlight DRI's broader commitment to collaborating with industry leaders and help governments reach their net zero targets.
