Ukrtelecom delivers battle birds to heroes of the Main Intelligence Directorate

Ukrtelecom has handed over a batch of Valkyrie drones to the Main Intelligence Directorate of the Ministry of Defence of Ukraine. These birds help our defenders fight the enemy in the flash points.

MID representative comments: "We will get them all. Thank you for the help, we need it. It is important to the whole front.

These Valkyries have already flown out on their missions."

Notably, Valkyries from Ukrtelecom, which have been previously transferred to the Main Intelligence Directorate under Rinat Akhmetov's Steel Front initiative, already help the Defence Forces de-occupy our lands.

Overall, Ukrtelecom has delivered nearly 20 Valkyries to the AFU.

"Every day we work to provide telecommunication services to Ukrainians. Equally important for us is to help our defenders. We are proud that we could provide these essential drones to our heroic intelligence officers so close to their professional day. The Valkyrie drones donated by Ukrtelecom and Rinat Akhmetov's Steel Front initiative have already flown out on their most responsible missions to bring our Victory closer,"

commented Ukrtelecom CEO Yuri Kurmaz.

Since the beginning of the full-scale Russian invasion of Ukraine, Ukrtelecom has handed over tens of UAVs to the Defence Forces, including Valkyrie and Leleka systems, hundreds of smaller drones, thousands of special tablets, medical items, hundreds of vehicles, etc. The total support provided amounts to around UAH 70 million, demonstrating Ukrtelecom's strong commitment to the country's defence.
