## **DTEK supports national coal mining industry: 7 new headers and coal shearers and nearly 300,000 spare parts over the first four months of 2023**

**DTEK Energy continues to provide equipment to meet the needs of Ukrainian miners. This allows TPPs to run smoothly and maintain stable output.**

During the first four months of 2023 DTEK Energy heavy engineering companies produced 290 units of mining equipment, including seven new headers and coal shearers, and nearly 292,000 spare parts. A cutting-edge RH220 roadheader is a

new high-capacity tunnelling machine. It's a major piece of equipment required to meet the needs of Ukrainian coal mining industry. It is the first model of roadheader produced by the plant this year, and the second model produced to date. The new machine has a higher capacity and is more reliable vis-a-vis its predecessors and is fitted with remote controls to ensure a safe work of miners. The new roadheader will soon be shipped to one of DTEK Energy coal mines in Dnipropetrovsk Oblast.
